A COMPLETE STUDY OF ORAL PRACTICES BY THE MALE HOMOSEXUAL

HOMOSEXUAL ORAL SEX

FOREWORD BY JEROME ROSE, M.D.

WRITTEN BY MARVIN JOHNSON

EDUCATIONAL MATERIAL—FOR ADULTS ONLY
SALE TO MINORS PROHIBITED

It is our attitude toward free thought and free expression that will determine our fate. There must be no limit on the range of temperate discussion, no limits on thought. No subject must be taboo. No censor must preside at our assemblies.

— William O. Douglas

FOREWORD

ORALISM THROUGH THE AGES

Oralism in its widest sense includes all sexual excitation connected with the use of the mouth, teeth and tongue. The scope and variety of sexual connections via oral sex contact are enormous.

Creative imagination employed in utilizing the ultimate variety of oral sex contacts will insure the utmost pleasure in stimulating homosexual sex. So that homosexuals may better understand the various methods of oral sex contact and total satisfaction, we are provoking new thoughts and creative illustrations in this area.

The sexual revolution has brought with it a new demand for information concerning the sexual organs, their function and how to enjoy them in a variety of ways.

The most important aspect of oral sex enlightenment is to offer some sex wisdom that will dispel the darkness of the old taboos, replacing them with scientific sexual knowledge, obtained through investigation and research by experts in the sexual field.

Kinsey's investigativebreakthrough revealed a majority of men at one time or another, had engaged in a homosexual relationship. Later scientific sex surveys show that the majority of young people today engage in oral sex. All this gives us pause for thought.

The reasons for the popularity of oral sex contact are practical as well as erotic. Perhaps never before have so many human beings felt so much pressure. And this intensified pressure of living in the jet age has contributed to the demand for total erotic stimulation, with literally no holds barred.

Young people today live in a hurry up age. With everything based on speed, it figures that sex would also be based on quick stimulation and satisfaction. The most logical place in the fast-racing world for young people to enjoy their sexual stimulation is the automobile.

Oral sex saves the bother of jumping in the back seat and untangling all of the arms and legs to get the organs gyrating in sexual unison. The simple act of unzipping the pants and pulling out the penis makes it possible to enjoy the titillating sensation of sucking.

This simple form of sex has almost become a youth classic. It is called the "blow-job." Once the stigma was removed, oral sex could be enjoyed to the fullest degree possible.

The "drive-in" movie has become the perfect setting for this "instant-sex" gratification. While one of the sex partners watches the movie, the other can act as the "lookout." When the first partner has obtained sexual satisfaction, that is the time the other partner goes down, a form of "democratic-sex."

When both persons are stripped, this "democratic-sex" can take place simultaneously in the "69" position. While one sucks on the genitals of the other, he, in turn is being sucked. To suck and be sucked is rated high on the thrillmeter.

Pajama parties provide excellent opportunities for oral sex satisfaction. Again, the ability to stay clothed, except for mouth-genital sex contact adds to the ease of having sex, thus contributing to its popularity.

No doubt the largest reason for this "French-Sex" style in the U.S.A. is the fact the confining sex shackles of our Puritan moral heritage has been thrown off. The Puritan sex ethic based on the Adam and Eve story in Genesis casts dark shadows on sex. Adam and Eve supposedly used to trip about in Eden, minus garb. But after Eve tasted of the fruit of the tree of good and evil, she is said to have put on her fig leaf mighty fast.

Suddenly God went gliding through the green gardens and

spied them in their newly donned fig leaves. He immediately asked them why. They replied because they were naked. God knew what they had done. "Who told you that you were naked," God demanded hotly. And man's innocence was lost forevermore. Adam and Eve exchanged carnal glances and man has never felt completely at ease in the buff since then.

From then 'til now, man has earned his bread by the sweat of his brow. Precisely what Eve did is anybody's guess. But some are inclined to think she had sex with the devil or went down on Adam. In any event, man and woman have been having sex ever since.

Judging from countless historical records, man has also been having sex with other men since ancient times. The ancient Biblical record speaks of David loving Jonathan so much they lay in the fields kissing until they exceeded. This probably means until they reached a physical orgasm.

Male-male sex became so vastly popular in a sinful old town called Sodom that even angels from God who'd come to warn the city to quit carrying on the way they were, were tapped for sex by the men of the town. Lot hastily offered his two daughters, hoping this might suffice. But, alas, it didn't. The men of Sodom snubbed Lot's generous offer and insisted upon sex with the angels. Of course the angels weren't having any, and the whole city was destroyed by fire from heaven. Lot, his two daughters and his wife made it out of the city but Lot's wife looked back. That look transformed her into a pillar of salt. And ever since then, the name "Sodom" has been synonomous with male-male sex.

Then came Babylon. Here in the city that boasted hanging gardens as one of the seven wonders of the ancient world, wild sex was carried on. Houses of both male and female prostitution flourished. Oral sex was a specialty of the houses. And all this, not far from the religious temples. Perhaps it was fashionable to first visit a house, have a wild sex act or an interesting orgy and then visit the Temple on the way home to make everything right with the gods or fates of that fleeting moment. The close proximity of a house of sex near a house of worship made this a distinct possibility.

Egypt had its homosexual activities. It was not looked upon as evil in this ancient country which also laid claim to one of the seven wonders of the ancient world; the Sphynx. And interesting to note, the Sphynx is the only remaining wonder existing in the modern world.

Cleopatra became one of the most celebrated oral sex artists of her day. Rumor, myth or fact has it that she personally fellated one hundred men one particular night. No mean feat in any age. The popularity of oral sex gained great respect in Egypt where woman first painted their lips to make them more stimulating and appealing.

Then there is Greece. Greece represents the absolute zenith of male sex activity. Here men admired, loved, and had sex with each other in wild abandon never matched in human history. Homosexual sex was not considered a threat to the state but something that made it great. The great passion and love that men felt for men is said to have strengthened them on the battlefield. The ferocity of the Greek fighters was well known. And interlaced into the fact of their physical courage and strength was the fact their love for each other forged a shield against the enemy that seldom could be crushed. Outstanding among the homosexuals of his time was Alexander the Great. It is said that he had conquered so much of the known world by the age of 33 he wept because there were no more worlds to conquer.

In Greece men established standards of physical excellence, both in the realm of beauty and physical endurance and skill. Strong men vibrated to the beauty and muscular strength of other strong men. Oiled and magnificently muscular men performed in great arenas in sports events for exclusively male audiences. Male-male love grew and is reflected in the finest male art and sculputure the world has ever known.

Yet these same men married, had good family relations with children who were disciplined and educated. The basis of ancient Greek education was a harmony of the physical, mental and moral

natures of men. And from this balanced approach to life sprang the great Greek philosophers, scientists and writers.

Rome produced an empire that ruled the world for hundreds of years. For pomp and regal size and splendor, imperial Rome has never been matched.

Emperors often had male lovers. Some emperors even went so far as to build cities, named in honor of their lovers.

In this way they felt they could give a lasting impact of the overpowering sensual feeling they possessed for their famous lovers.

Also in Rome a strange, sadistic impulse was developed. Men began deriving huge sensual pleasure from watching other men suffer. The path to this form of sexual excitation led Romans down a twisted road of depravity to where the more torture administered, the greater the sensual pleasure received. Naked men were let loose in arenas to kill or be killed. Men were shot from cannons.

Whipping became a great sport. Men enjoyed whipping their victims, reaching orgasm watching them writhe in pain or torture. And then, with the fall of Rome, the world was hurled into the Dark Ages. Now, male-male sex had to go underground for centuries. But oral sex went on just the same. This is easily verified in the countless stories, poems, and pictures left behind as mute testament to the continuing popularity of oral sex.

England became a world power and suddenly the English sex views had world-wide impact. Depending upon the personal sex desires and wishes of the English king or queen, the entire nation and other nations became involved.

The most repressive era of all, no doubt about it, was under Queen Victoria. Even though rumor persists she liked to fellate her strong, young guardsmen, her attempts at suppression made underground sex popular. Pornography flourished as did houses of male and female prostitution.

But probably the world-wide change in attitude toward the significance of sex came about as the awful knowledge of what the industrial age had done to man's ability to wage war following World War I.

Here, for the first time, the might and knowledge of man's advancing scientific progress unleashed old hates with bloodshed and death matching undreamed of scales of evil. Now, sex had to be considered in the light of the total impact on man's life. And for once, other things instead of sex loomed as far more evil, vicious and deadly.

As the old hates fired on by prejudices of the past hurled mil-

lions of men to their deaths, sex became a necessary escape to save a man from the madness he faced daily in the trenches. Sex was a safety-valve escape. And when the men had a chance to cut loose, cut loose they did. Here in the old whorehouses of Europe, American men in service were now having sex in ways they knew nothing about. Especially in France, oral sex was fashionable and American men enjoyed the titillating sensation of sucking. And having thus learned their sex lessons well, returned to the U.S.A. demanding their sexual rights.

They applied oral sex with all the vigor and thrust of a person set free from death and their loving, happy sweethearts and wives felt freer than ever before to enjoy their bodies thrilling to the fact they were alive, having narrowly escaped death. And soon the "blow-job" became a specialty of the American houses with whores being carefully instructed on how to best suck a man's penis, and the importance of swallowing semen.

Then came the crash of 1929. The depression that followed brought a tragic period of despair and confusion, a far cry from the light-hearted headiness of the roaring twenties. And then the world was swept into another spectacle of blood and death — World War II.

Fighting servicemen once again were on battlegrounds all over the world. In their brief moments of release from the pounding pressures of warfare, they sought sexual satisfaction with new-found fury. And the wilder the acts, the more satisfying. Once again, oral sex came into sharp focus. More and more men demanded whores submit their mouths and throats to their penis.

Then the Korean and the Viet-Nam conflict followed. All during this time American servicemen were finding sexual satisfaction with whores in far-flung lands. In some cases in the Orient, whole sections of the whore district specialized in sucking. Sometimes it might be called "Suck Alley." Here men knew what they were getting and they demanded anal and oral sucking satisfaction, willing to pay more for this specialized sex act than a routine face-to-face position.

And all of the millions of servicemen, brought home with them sexual experience and knowledge, that made them dissatisfied with traditional sexual mores of the U.S.A. Now, oral copulation had become a common form of sexual gratification. And with this oral sex acceptance, the old sex codes seemed hopelessly outdated.

CHAPTER ONE

THE GENITAL ORGANS

For men who want to enjoy sex with other men to the fullest it is vital that they understand the complete function of the genital organs.

Knowledge of how the genitals function will add to the pleasure of male-male sex. The mental and physical well being of every individual involves sex. And an understanding of how the sex organs function is vital to necessary sexual satisfaction and fulfillment.

Therefore, we will begin with the penis and how it functions. The penis, in its usual condition, hangs in a flaccid state. The penis is composed of blood vessels which make the growth and change to the erect state possible.

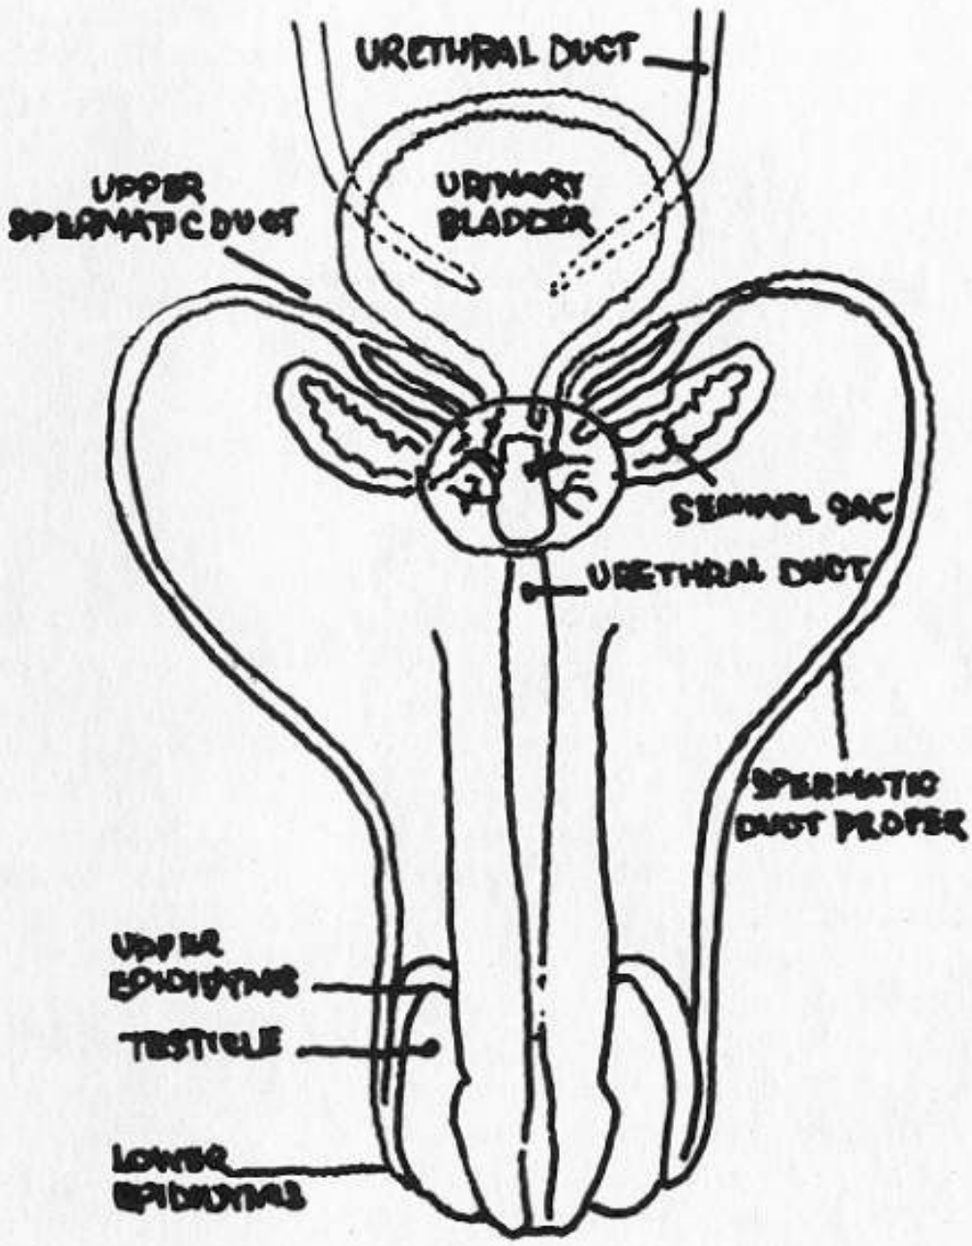
The testicles hang beneath the penis. They are oval shaped and commonly referred to as "balls," "rocks" or "nuts." The testicles are covered by a fibrous tissue which extends up into the central portion of the gland. Both the testicles and the penis are very sensitive to temperature. In cold weather they reduce in size, moving nearer to the body to obtain warmth.

However, when the climate is warm, the testicles return quickly to their normal hanging condition, some distance from the body.

The penis size in its flaccid state, is no index to its size in its erected state. Frankly, there is no way to determine from the size of the flaccid penis its size when erection is complete. The penis is called quite a variety of names such as "dick," "cock," "tool," "rod," "prick," "prong" and "hammer."

It is a scientific fact that the size of the flaccid penis can be only four inches and yet in erect state be seven or eight inches in length. And it is also true a man may have a penis in erection the same approximate size as the penis in its flaccid state.

Sexual stimulation sets the blood vessels in the penis into action, causing it to swell and become hard. This condition is often called "hard-on" and this is exactly what it is.



URETHRAL DUCT

SEMINAL SAC
URETHRAL DUCT
SPERMATIC
DUCT PROPER
TESTICLE
LOWER

Men get turned on sexually by erotic sights and sounds and this sets the blood vessels going, pouring blood into the penis to harden its spongy tissues. Morning urinary pressure can cause an erect state, but this has nothing to do with erotic stimulation.

The sensitivity in the head of the penis produces the major part of the stimulation a man experiences sexually. The network of nerves contained in the head of the penis is known as the glans penis. Following climax, this sensitivity must be remembered, for to continue with a sucking pressure can cause extreme displeasure, instead of pleasure.

A covering of skin, known technically as the preuce or foreskin covers the penis. If the man is uncircumcised, the skin is usually pulled back, allowing greater sexual excitement. The removal of the loose skin which envelopes the penis head is known as circumcision. The majority of male babies born today are circumcised.

Some will argue that circumcision lessens the excitement experienced sexually but there is little proof to substantiate this claim. What is known is that the penis head can be kept clean from dirt which might accumulate if this operation was not performed. And the cleanliness of the penis eliminates any unpleasant odors that might follow such an accumulation of dirt. For the sake of enjoyment of the cleanest genital areas, it is recommended that the penis be circumcised.

The scrotum is the name given to the bag or sac in which the testicles hang. One testicle hangs a little lower than the other. The testicles produce the spermatozoa as well as the internal fluids which contain the hormones. A wall of membrane divides the scrotum into left and right halves. Each sac holds one of the testes with the epididymus, a long structure which is oval-shaped and attached to the rear upper surface of the testicle.

Spermatozoa is produced by the testes at a temperature several degrees below normal body temperature. This is essential for normal sperm production. There have been cases wherein shorts that were too tight may have caused partial infertility. This may just be an old wives' tale.

The Cowper Glands go to work when the male is sexually stimulated. These two glands create a clear, sticky substance which emerges from the penis head in drops. This secretion can lead to premature discharge, some mistaking it for the actual semen. But this discharge in no way lessens the male's ability to complete the full sexual act with a regular discharge of sperm.

The prostate gland, about the size of a chestnut, is situated around the uretha, at the neck of the bladder. It has nerves

which increase sexual excitement. At the time of orgasm it lets forth another secretion which mixes with the other fluids, creating the final substance. The color is milky white and it has a very definite odor. The spermatozoa is carried here and it is this that, combined with the egg from the female body creates life.

CHAPTER TWO

THE PSYCHOLOGICAL SIDE OF HOMOSEXUAL ORAL SEX

According to Kinsey's surveys the chief sources of orgasm for the human male are heterosexual petting, heterosexual intercourse and homosexual relations followed by masturbation. This knowledge gives us some clue as to the great frequency of homosexual encounter.

It has taken until modern times for the scientific research of psychologists and psychiatrists to generally agree that the effect of masturbation is not harmful but helpful both psychologically and physiologically.

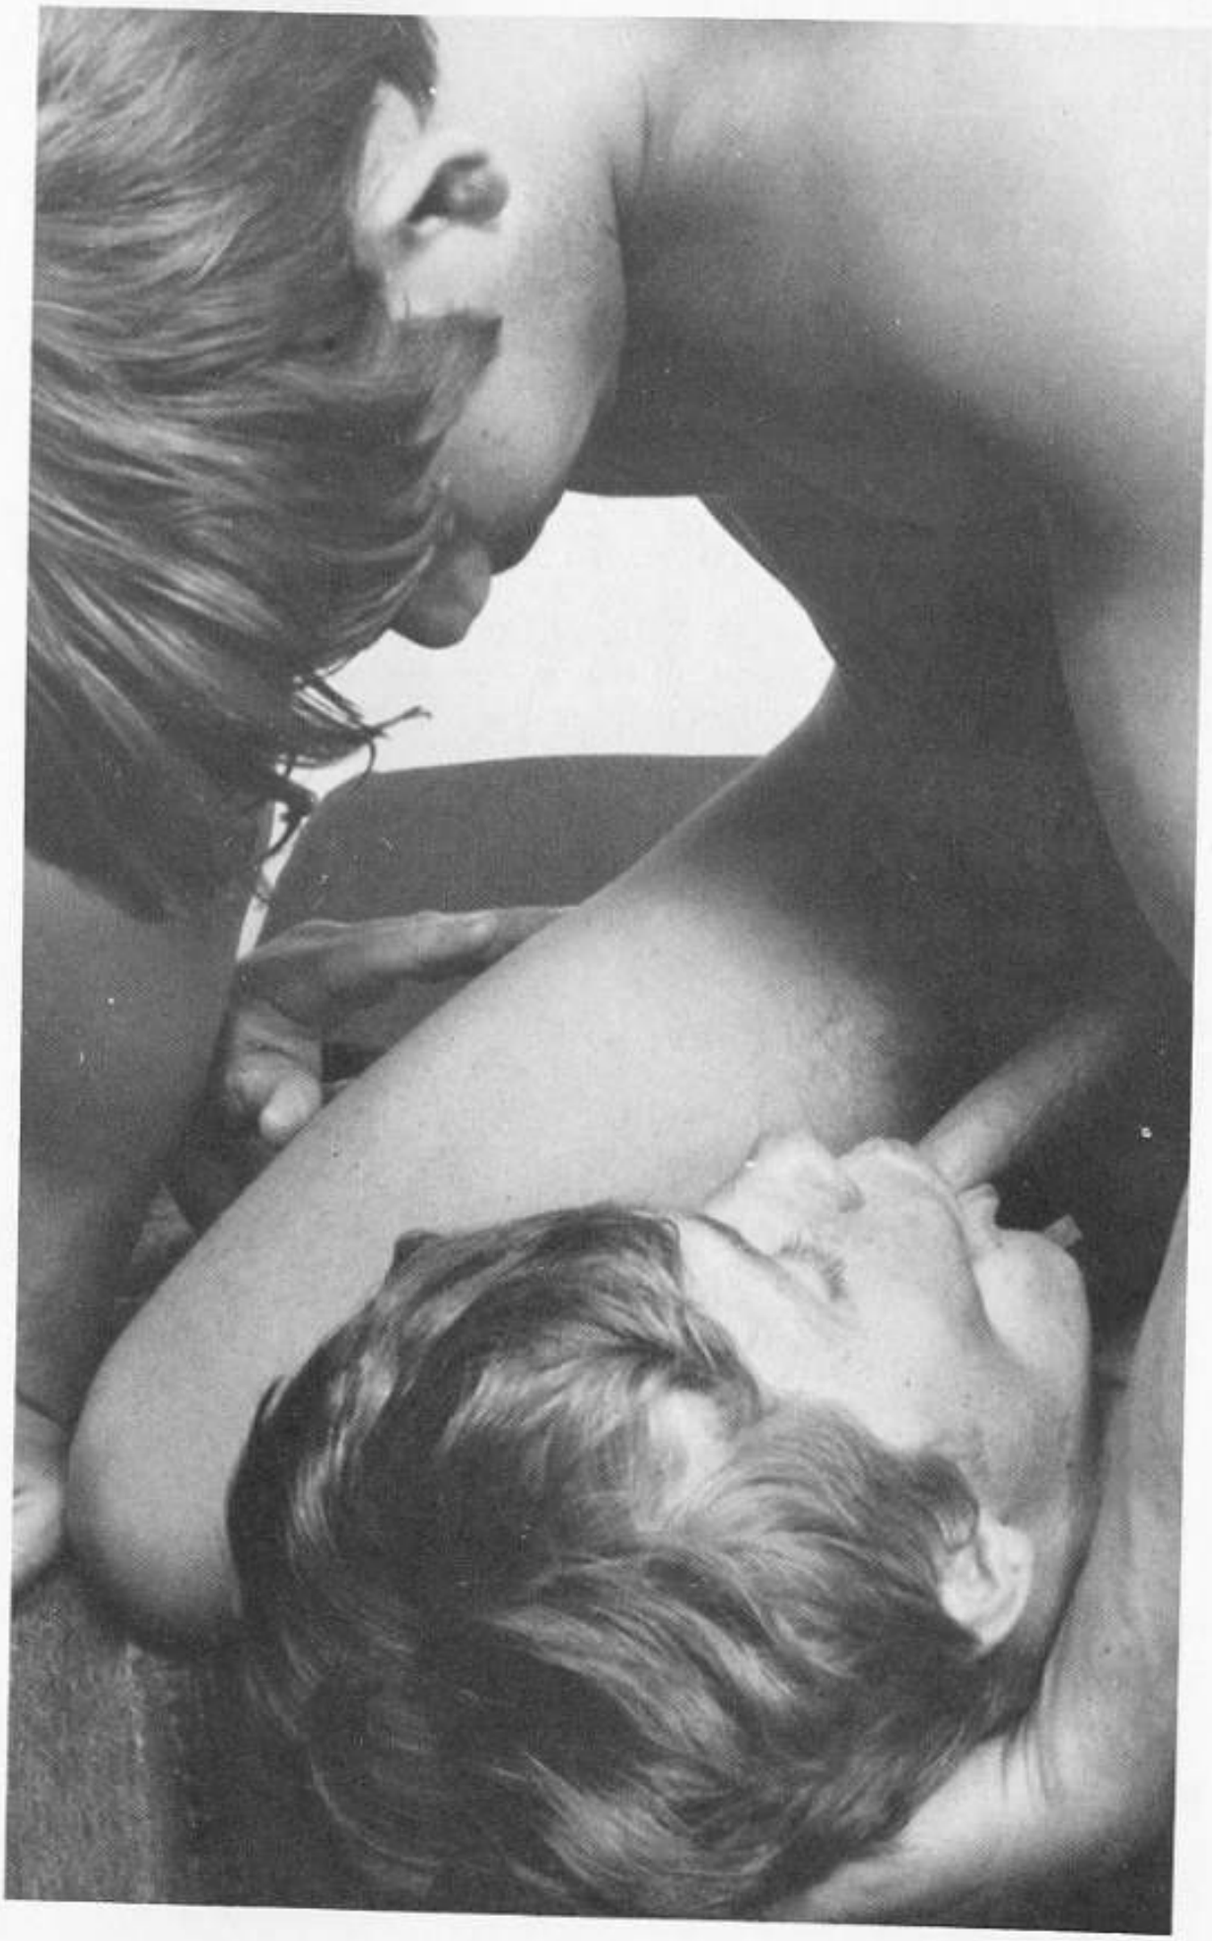
In their long study of sex habits of animals they learned masturbatory behavior in animals (mammals) from mouse to elephant are perfectly normal sexual expressions.

The centuries of "shame-and-guilt" linked with masturbation cannot be changed. Homosexual activity has not only existed in the animal kingdom but it has always been present in human society.

Unfortunately, great sections of the American population were exposed to sex-negative, sex-restricting taboos in their early warped environment. And this sickness syndrome that links guilt and shame with a natural expression of feeling which bursts into a sex encounter with the same sex has caused all kinds of damage.

A child who is physically crippled misses much of life. A human being who desires sex-relations with the same sex, but is crippled emotionally to the point where he cannot express what comes normally for him, is equally victimized.

Therefore, it is for those unfortunate victims of sexual prejudice and ignorance we are writing this book. We are trying to



explain one basic fact. The psychological foundations for oral sex encounters between two men must be made properly or the entire sexual experience will be ugly and revolting, instead of exciting and pleasurable.

Unless the person who desires to participate in oral sex relations with the same sex has a willing partner whose mind is not crippled by the old taboos, the entire experience will be distasteful and unpleasurable.

The mind rules the body. And if the mind is chained to primitive superstitions, it cannot be possessed with the sexual freedom necessary to make the act of oral intercourse as exciting, stimulating and gratifying as it should be. So, before any sex experience is obtained it must be kept in mind, only a person who is truly mentally and sexually free should become involved in this sophisticated form of sex. While it is true that the very wealthy and highly educated have never let the taboos of their moment in history take away from their enjoyment of any form of sex, it is equally true that the ignorant, illiterate and uneducated class listen to the myth-makers and chain their sex to simplistic styles.

The creative imagination required, escapes them, because often as not they are not possessed of a mind that has a spark of creativity. The monotony and boredom of humdrum sex or food never reaches them. Their ignorance insulates them against any attempt to be sexually free. Strangely, it is this quality that reproduces itself until the world is over-populated. People pollution which brings on air, land and water pollution truly degenerates the society. How two men having sex can be considered degenerate in the light of the poverty, disease and ignorance illegitimate births of the savage-type intellect cause, is difficult to comprehend. Truly we need a total revamping of our morality, for the old morality has brought us to every conceivable kind of crisis, including that of survival itself. Normal human beings have killed perhaps fifty million other normal human beings in the last 100 years and that is why we cannot strive for normalcy. The reason, being self-evident.

If some of the unrestrained sexual encounters producing people the world doesn't need, could be channeled into areas of oral sex, much good might accrue.

But the first basic crippling thought we must rid ourselves of, is that the human body is equipped with a set of dirty sex organs. The ancients knew enough to worship the sex organs, the moderns hide them. Black African female dancers, who in their normal state dance bare-breasted with carefree abandon, couldn't

appear in Los Angeles without doing what was abnormal for them. They were forced to cover their breasts. So, it is obvious the view of normal sex expression, is in reality, not even what constitutes normalcy but what a particular group of people who guard the morals construe to be "good."

When the body, which even the moralists say is created in the image of God, is looked upon as clean, not dirty, then the sexual fun can begin.

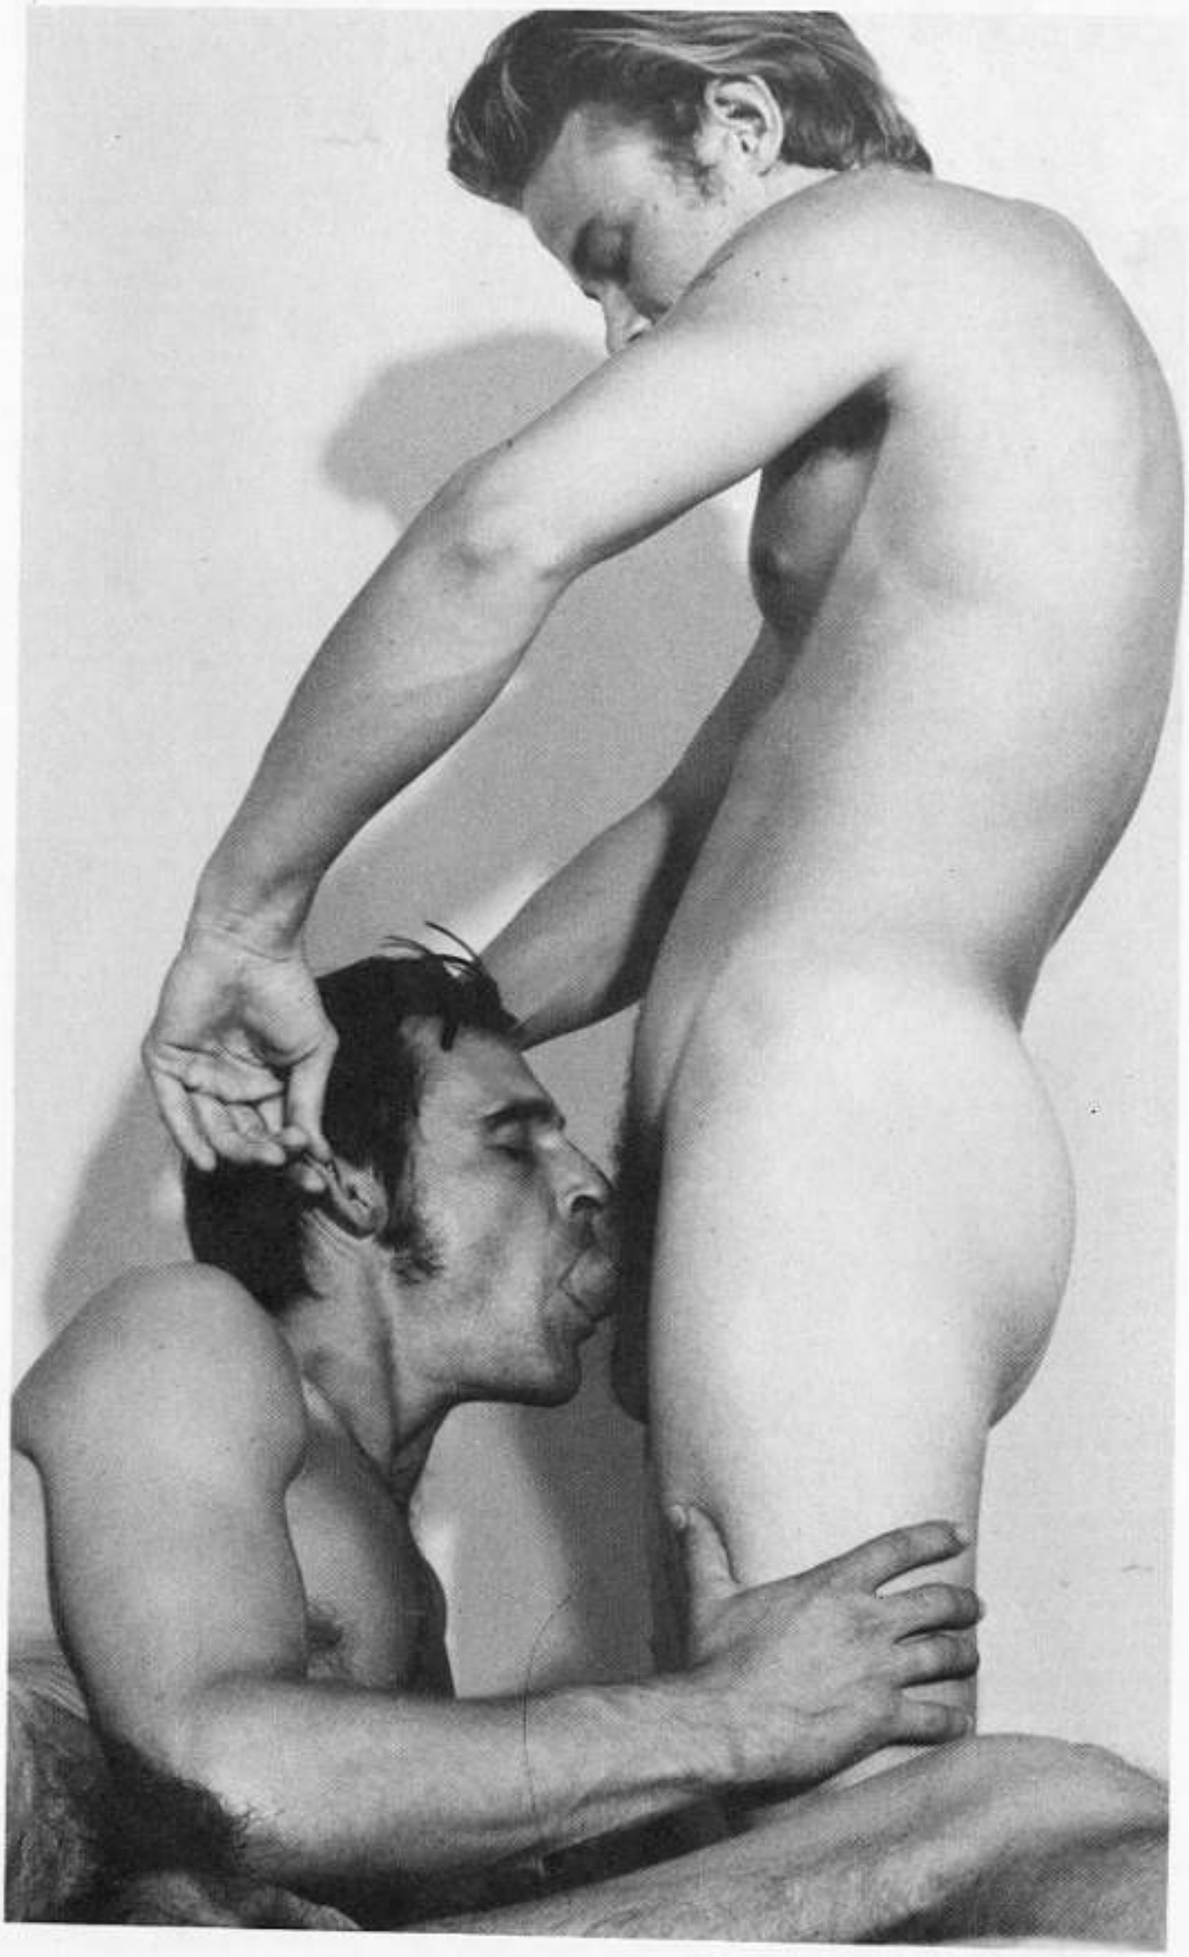
When taboo-type thinking, dirty-minded cliches and all sorts of other manifestations of the sex-sick syndrome are in evidence; run from any encounter with such a diseased person. For the mental contamination he vibrates can only pollute and corrupt. Often such comments as "What kind of a sex fiend is he?" can leave a mental dent nothing can erase. Therefore, it is essential not to become involved with such stereotyped, sick-society conditioned thinking.

If you both feel free of subjecting your sex encounter to any restrictions you will both equally delight in the sexual celebration you are about to encounter.

The enormous frustrations that such thinking has created in the society is bound to reap a rich harvest in people who delight in saying of male-male oral sex, "How disgusting!" Others will snidely comment, "How revolting!" And some will attempt to express their own great desire, but at the expense of the victim who is so anxious for sex he is foolish enough to fellate without being fellated.

Psychic-cripples are all around waiting to cause havoc and trouble to soothe their troubled psyches. And these are the people who are not only dangerous but disgusting. They are sexual hypocrites. They intensely desire the sexual satisfaction that oral sex with the same sex brings. However, they don't dare admit this, not even to themselves. Their subconscious won't go along with the lie. This fight between the conscious and subconscious causes a dangerous split. It is against this warring split that many an overly anxious, overly aggressive homosexual has battled. And it can end in a deadly manner.

One famous film star of the late twenties and thirties apparently became so hung-up on his own sexual desire he didn't employ sound judgment. He wasn't seeking a mental union along with the physical at all. And he was beaten to death by two frustrated homosexual-baiting young men. It is against this madness, produced by a "shame-and-guilt" built society, that the homosexual must constantly be aware.



Once it is realized that a psychic as well as a physical union is vital to total sex release, a true sex harmony is achieved.

In the light of what is known about homosexual sex in Babylonia, Egypt, Greece, Rome, England and the U.S.A., we know it has been practiced on a vast scale. In the old world it was held up and not looked down upon. Strong men, delighting in their own bodily beauty and strength desired to know other strong men sexually. Weakness was in no way identified with this form of sexuality. Strong in battle, strong in bed.

In an attitude of manhood and strength uninhibited men may desire each other. With no feeling of guilt or shame crippling their creativity they can let their own wild passions rise to meet the occasion of their lust.

As they admire each other's naked bodies, find mental communion, they can prepare for satisfactory sex. One partner asking the other to perform acts he is unwilling to perform, is not only undemocratic, but unhealthy.

CHAPTER THREE

PREPARATIONS FOR ORAL SEX

The body in a glow of health is always more exciting and stimulating than a weak or sickly body. Vibrant health must be maintained to enjoy vibrant sex. And this includes obtaining the right amount of rest, a balanced and nourishing diet, good exercise and a good mental outlook.

With good strength comes peak sexual excitement and en-

With good strength comes peak sexual excitement and en-durance. This can be brought about through being actively involved in doing what one wants to do. If the momentary job is not precisely what one wants eventually, but could lead to something more meaningful, it can be vested with the dignity that will provide a positive mental outlook.

This outlook will allow the mind to rest, and in turn the body. When the body is properly rested it will feel refreshed and revitalized and this is essential for a good sexual celebration.

Good nourishing food provides strength which is vital to true sexual enjoyment. A diet of sweets, potato chips or soda;pop and other popular but non-nutritive American snacks cannot help but lessen the impact of sexual performance.

A hearty breakfast provides body fuel when it is needed most, at the start of the day. Protein provides good fuel for energy at lunch and dinner. High sex foods are in fish, cottage cheese and Vitamin E. They boost sex power.

The place where the sex encounter takes place is also important. It should be a place where there will be no disturbances. No one knocking on the door or phoning. Absolute privacy without a feeling of being rushed or fear of someone dropping in are necesssary.

If the bed is firm and large this will provide the place for the most enjoyable sexual positions to take place. First, a shower is essential. Cleanliness is a must. A good deodorant soap will keep the body immaculate and appealing. Then a good deodorant and some kind of body splash will help.

A type of music that would be appropriate for lovemaking can add another sensual dimension to the sex act. Should the beat of the music provide a sex beat, the pleasure will be increased just that much.

Lighting can also aid sex stimulation. It is better to have lights low. With stimulating erotic music, low key lighting, and a large, firm bed, the fun can begin. Perhaps a showing of a film on oral sex in 8mm color would offer visiual stimulation.

It might be an oral sex orgy that would shed any remaining inhibitions of a person who honestly seeks sexual liberation and freedom. This could turn the tide and start the free-wheeling oral sex celebration.

Or it could be photos. Photos of whatever proves stimulating. By having a variety of photos, you might determine by the specific photo the person liked, the act they preferred. For example, if repeated attention is paid to erect penis photos, in all likelihood this is what stimulates. And then there is the individual who particularly likes anal-oral sex. This will be known by the attention paid to shots of the buttocks in various positions. "69" shots calling forth comments might be the clue to begin there.

But generally speaking it is good to begin slowly and build up to the pitch of the total sexuality of the completely erotic "69" position.

CHAPTER FOUR

HOW TO BEGIN ORAL SEX

Once the interest and desire has been built through the erotic stimulation of sight, sound and smell it is time for the sense of touch to go to work. An excellent way to begin would be a warm embrace and a kiss. At this point the penises will touch. In all likelihood they will be rock-hard and raring to go. But restraint is the better part of sexual valor. A knowledge of how to use the tongue when kissing helps. One partner can take the lead and begin by lightly stroking the lips, the nose and the face with the tip of the tongue. Following this preliminary stimulation, both partners can use their hands to stroke each other's back and grip each other. Using the full hand to clasp the buttocks can be particularly exciting.

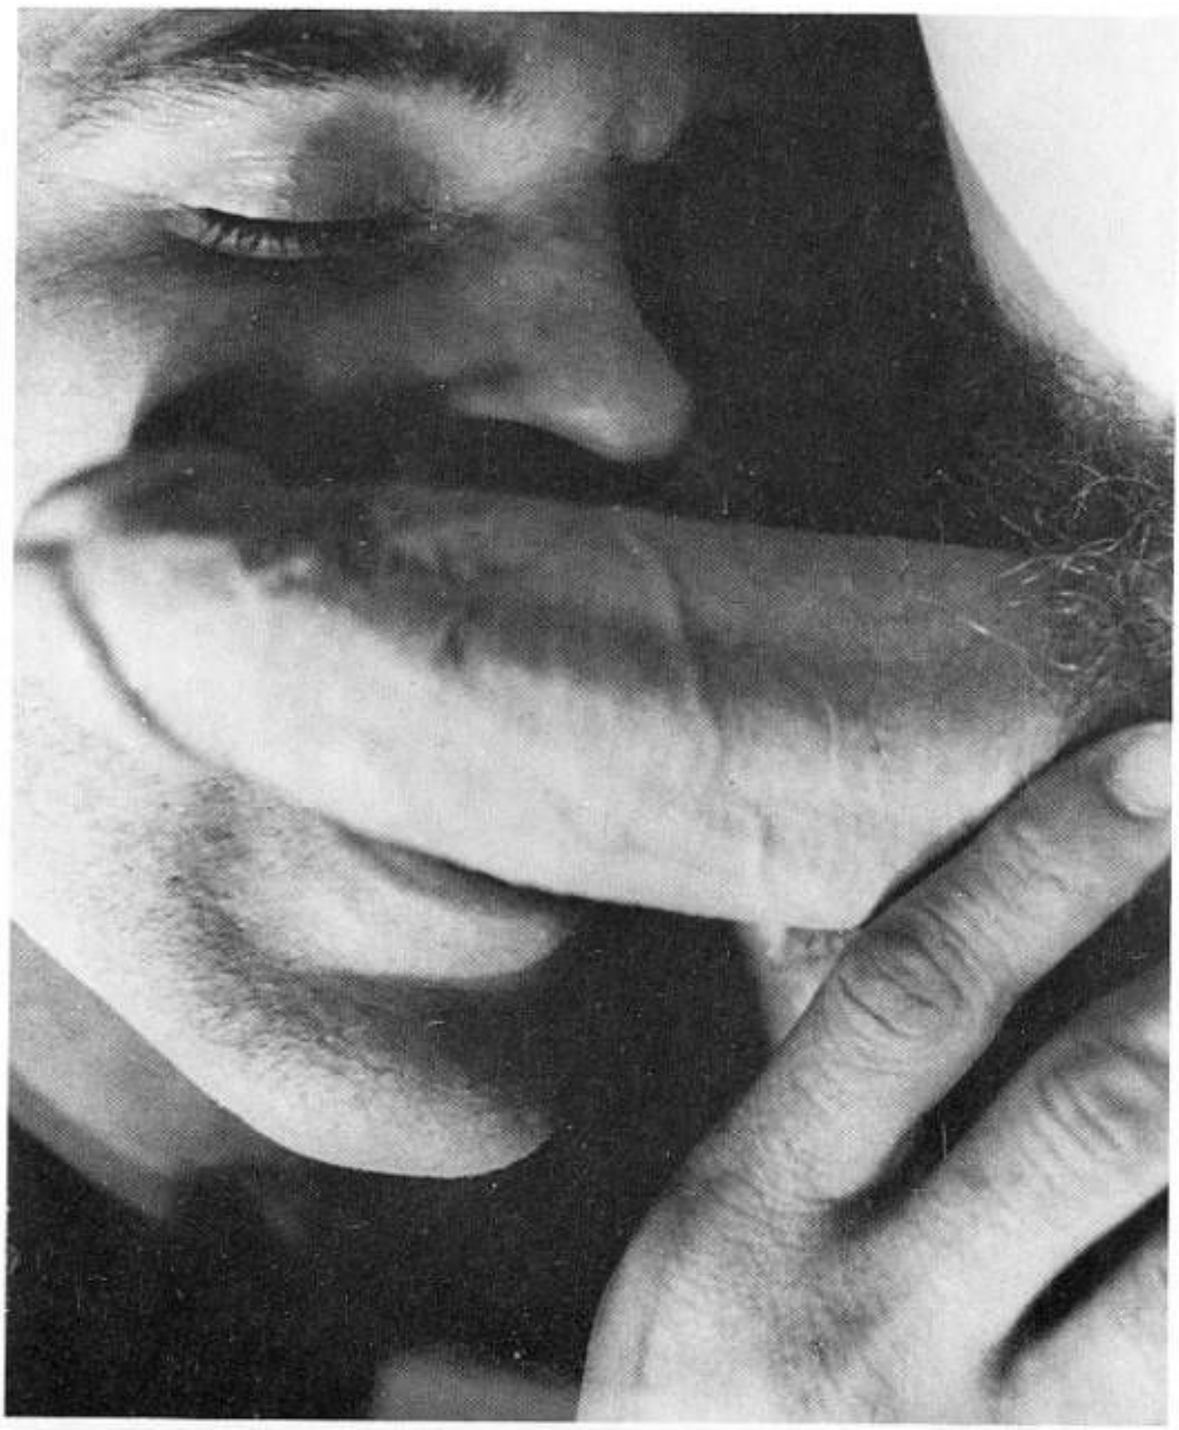
But the feel of the penises pressing hard against each other will probably be the most exciting sensation. Now it is time for the tongue of the lover who is leading to plunge into the mouth

of the man he is loving.

Here is where oral sex technique comes into play. Some people possess an instinctive sexual ability to stimulate through the use of the tongue. If the tongue begins in quick, darting movements and is met by the other man's tongue, sort of fighting a tongue duel can prove highly exciting.

A mouth exploration can then take place. When the mouth of the initiator explores the teeth with darting tongue movements and the mouth of the other man, the pleasure will build swiftly. Now it might be a good time for one man to begin a complete oral body job which is known as "around-the-world." This means around the body world. And it means it literally.

A talented tongue should enrapture and thrill the entire body and this can be done with no guilt, shame or fear if the proper understanding of sex takes place. The erogenous zones that can experience excitement and titillation must be known. Otherwise a lot of great sexual excitement is lost.



Now would be a fine time to project slides of various oral sex acts to multiply and increase the stimulation or show motion pictures of the acts going on. Also, it might be advisable to have a light drink for relaxing the subject. But use alcohol in moderation as it is a depressant and will dull the senses, thus lessening the sexual excitement.

To varying degrees people are stimulated by tongue contact with the ear. Some people are extremely excitable to ear-tongue sex stimulation. If the person who is administering the ear-tongue oral contact uses a firm, rapid stroke, combined with a circular stroke, it can prove very exciting. The firm, rapid stroke should see the tongue employed like a small penis, thrusting back and forth swiftly.

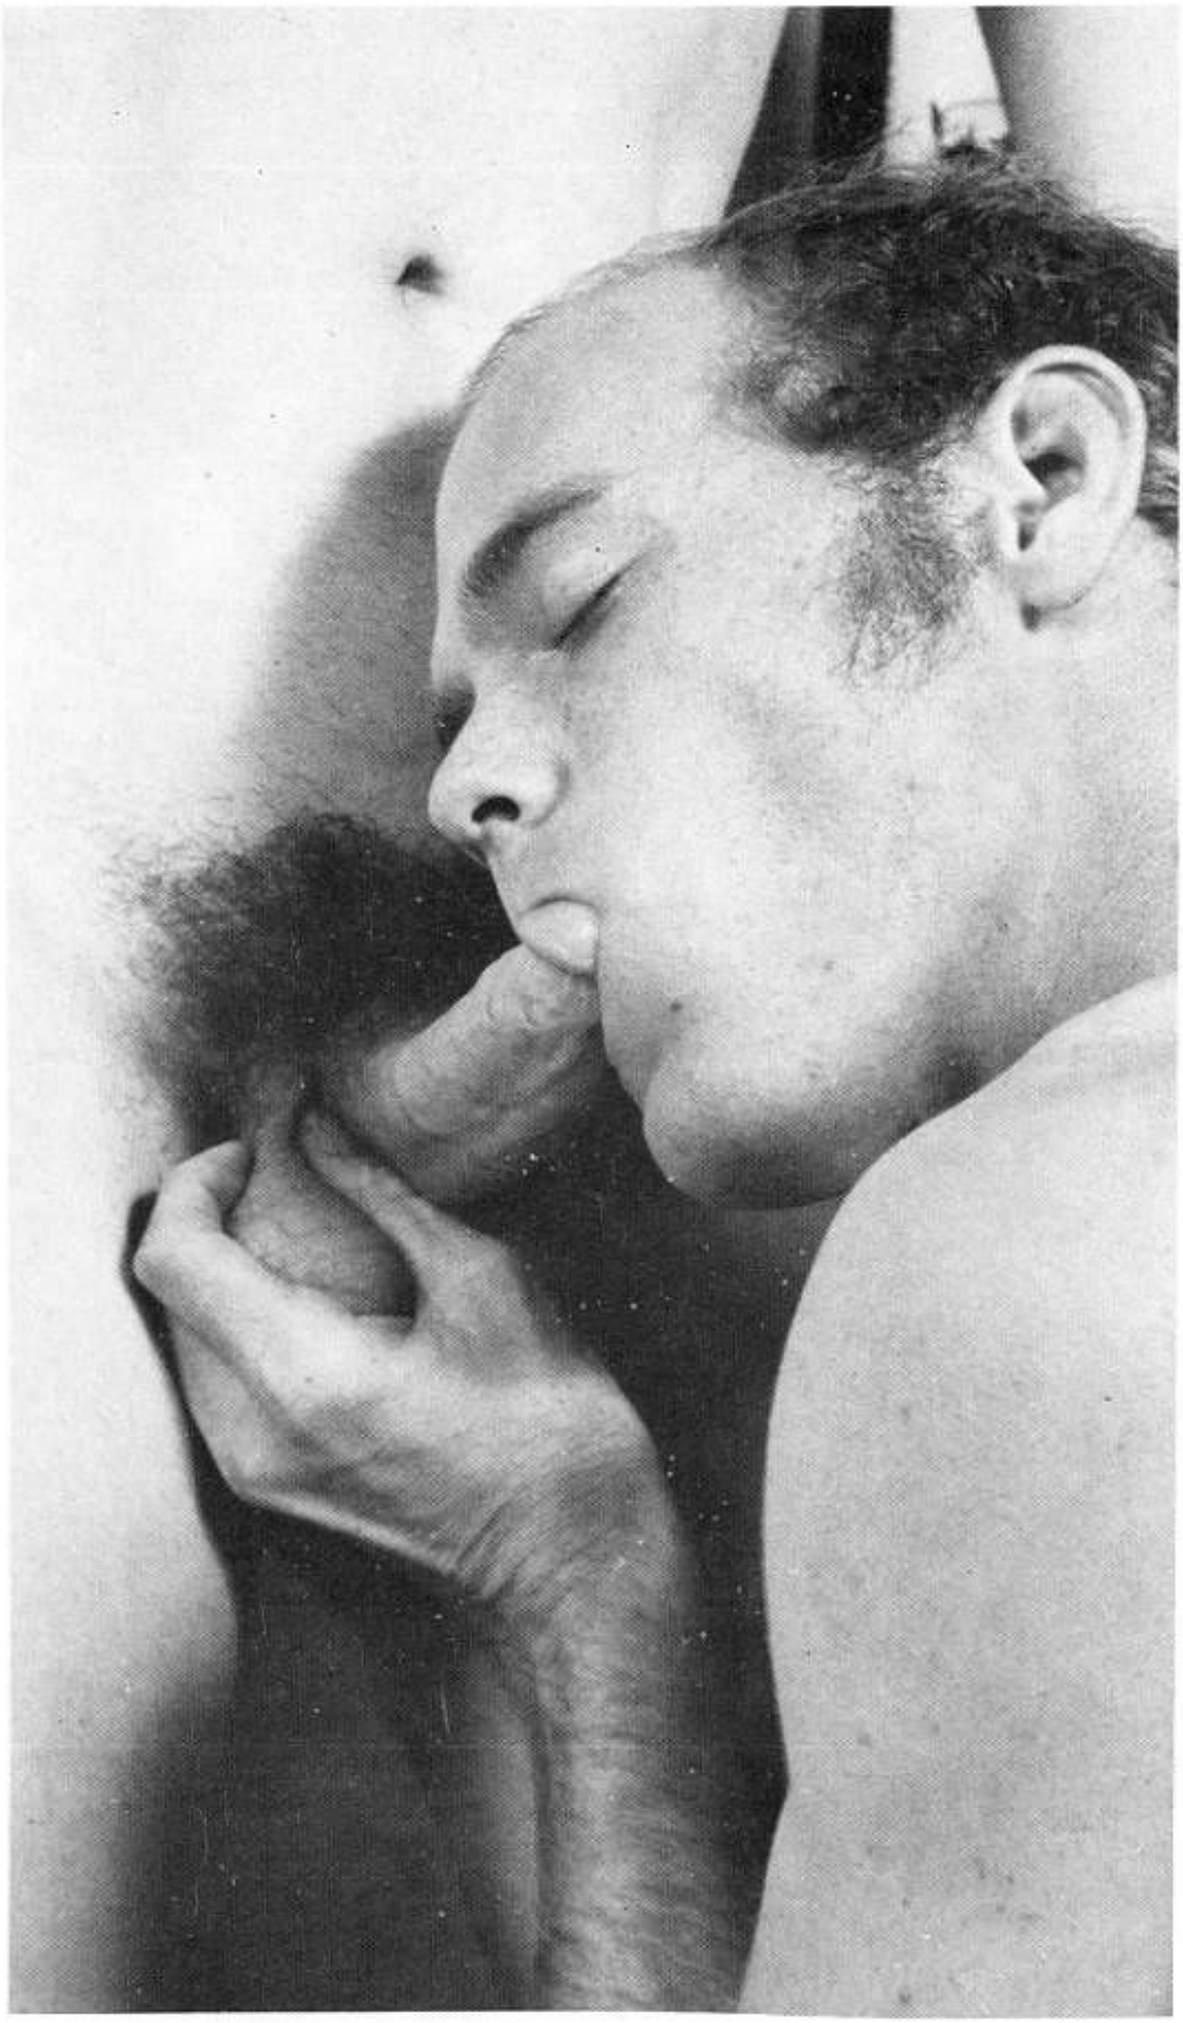
All the time this is going on, the stimulation of sight and sound, coupled with tongue and hand touch, will keep things moving. It might be a good idea to start slowly masturbating the male organ along with the kissing and tongue licking. The one who is being loved would do well to masturbate his lover, pulling in turn at his penis and then his balls. This amounts to utilizing the senses to the fullest each moment.

When the ears have been lavishly licked and loved, it is time to commence licking lightly over the closed eyes. Then make a tongue trail on the nose. Next suck on the lips. Suck on the lower lip. This will bring increased pleasure. Now it is time to make the descent down the body. The male breast can be stimulated and employing trained technique can be sexually very exciting. The mouth should enclose itself around the male breast. Then the tongue can lick in a circular motion. Around and around it can lick. The teeth can bear down and lightly nibble. Now it might be a good time to move the hand from the penis to the inner thigh. Here the body can be stimulated and prepared for the final act of intercourse effectively.

A light tongue-trail can lead from the chest to the stomach. And then light lickings around the pubic hair can stimulate but reserve the penis thrust and licking of the testes until the last.

Feel and grope with the hand down the length of the leg. Then work your way down one leg at a time, with short and light licks. Finally you will arrive at the toes. And here is where many people fail to find the sexual stimulation awaiting them because they are unaware that the toes contain sex stimulation potential.

First lick on the toes. Next, suck on them. One toe at a time with smooth, sexually guided sucks. all the time reach up and grope for the buttocks, the "balls" and the penis. This is vital as it is the combination of actions at the same time that makes for total sexual involvement and sensation.



Now, that you have completed sucking on each toe in a very sexy manner as if each toe was a penis, commence with the other leg. Go down the foot and lick again on each toe. Do this eagerly, joyfully to insure the sexual celebration is just that, a total experience, a real sexual holiday celebration.

Now that you have finished the licking and sucking of the toes, it is time to work for the next to the final sexual excitation. Go back to the mid-section and ask the one you are having oral sex with, to get on his hands and knees. Once he is on his hands and knees, lick around his buttocks. Grip the buttocks with both hands. It will add to the stimulation to watch all this sexual activity in a mirror. It is important that you perform anal-oral sexual contact with total lack of inhibition if both persons are to enjoy it fully. If both persons want to enjoy oral sex to the fullest this is one of the most stimulating and unique ways to do it. Now, the lover should start massaging the testes, the prostate gland, and pulling at the penis. One hand can grip the buttocks and squeeze it while the tongue licks all around the anal area. Cleanliness, body deodorant soap and men"s lotion splash, all help make this activity pleasurable.

The tongue movements must build in their intensity and insistency. They must increase until the stimulation becomes unbearably exciting. Then, sharp tongue jabs should be administered while each hand is placed tightly clasping the buttocks. This is essential. Some partners like it when a lover lustily calls out, "Suck my ass." This increases the pleasure many times over if it is done in a sexy, low voice and with complete masculinity. Now is the time for the hands to continue their grip and the tongue to continue its trip into the anal area. The one who is being sucked will be achieving a new dimension of erotic stimulation. And he will shove his buttocks back so the tongue plunge can be farther.

Undoubtedly he will glance in the mirror to watch his buttocks being gripped, and sucked, and tongue-fucked. This must not continue so long that he cannot hold back his climax, as the climax is something that must be done in a precise manner, if it is to achieve complete satisfaction.

When the pressure of the sexual stimulation has built to just the right pitch, then it is time to have the partner quickly flip over. A pillow placed under the buttocks might give the proper vantage point to complete the oral act of intercourse. Now is the time to grab the penis, gripping it tightly and the sucking should commence. This is important and should be done with experience or not at all. The head of the penis is where most of the sensation lies. Therefore, the sucking should be concentrated on the head.

Swift back and forth movements can produce tremendous pleasure and variety slow-sucking for contrast will add pleasure. The testicles can be stimulated through gently tugging and pulling. And if a person so desires he might lick on them and suck each one individually into his mouth. This will produce extreme pleasure and the taking of the penis into the mouth must follow swiftly.

The one who is being fellated might put his hands on the sucking lover's head. By stroking the head correctly he can create intense pleasure. The one who is doing the sucking must thoroughly enjoy his sex action for the one who is being sucked to thoroughly enjoy being sucked.

Now a steady sex thrust is being built to the point of climax. Often the one who is being sucked likes to cry out, "Suck it. Come on and suck it off." These and other erotic comments can add titillation and sexual stimulation. "Suck, suck that cock. Come on cocksucker, suck," are equally erotically stimulating. Now the bed is heaving with the throbbing bodies as they build to climax. And now comes perhaps the most important aspect to oral sex action. That is the final thrust and explosion of the throbbing penis.

"Ohhhhhhhh," the loved one will likely gasp and groan. "Suck it, suck that sucker . . . suck it. Eat it. Eat it." About now the penis has exploded into the mouth of the one who is doing the sucking. And the hot jet stream of sperm flows freely down the loved one's throat. The sucking act is complete. The eating action finally concludes the sexual pitch and excitement. The heaving bodies can finally rest. The one whose body has been licked and sucked has learned a new dimension in sexual excitation and stimulation. The world of oral sex has opened a stimulating new door for him.

CHAPTER FIVE

VARIATIONS IN ORAL SEX ACTIVITY

Nearly every individual derives enormous pleasure from oral-genital sexual contact. And a unique method of oral-genital contact may be enjoyed when two men fellate each other. This is democratic sex in action. This allows an intimiacy and understanding of intimacy that cannot be had in any other way. While it is true that the female's clitoris is compared to a small penis and does possess a small head, it simply is not the true equivalent of the male sex organ.

Freud and Bergler postulate a theory that an adult homosexual represents the adult who hasn't fully recovered from the weaning act, it is equally true many leading sex authorities disagree with this viewpoint of male-oral sex relations.

One outstanding sex authority is Donald J. West who insists it is impossible to assert all homosexuals are orally or anally fixated. To explain away homosexuality as a fixation would mean these fixations must be showing in every case. This isn't the case.

The fact is a mouth is a mouth is a mouth. The only difference is the way the male psyche views it. Be it a male or a female mouth doing the same thing. Some men in our time, in our social moral viewpoint, would consider it a challenge or threat to their masculinity to fellate or be fellated by a man. Other men don't fear their manhood being threatened by oral sex relations and thus accept the pleasure such contact affords.

Following the first round of sex, a pause for relaxation and rest might be good. Some people like a drink, something to eat, or a cigarette. Other men like to take a shower. A break before round two is sometimes advisable. It depends upon the persons involved.

The second sex contact might be the "69" position. With one man getting on his knees he can let his balls hang on the face of the other while he plunges his penis into his lover's mouth and grinds away his sex. And at the same time he can suck in the other man while is he being sucked. A preliminary might be anal licking and some tongue stabs in the anal orifice. This would provide a stimulating start to a rousing second round of sex. Trying to time each other's thrust so that the penises will explode in orgasm at the right moment is important.

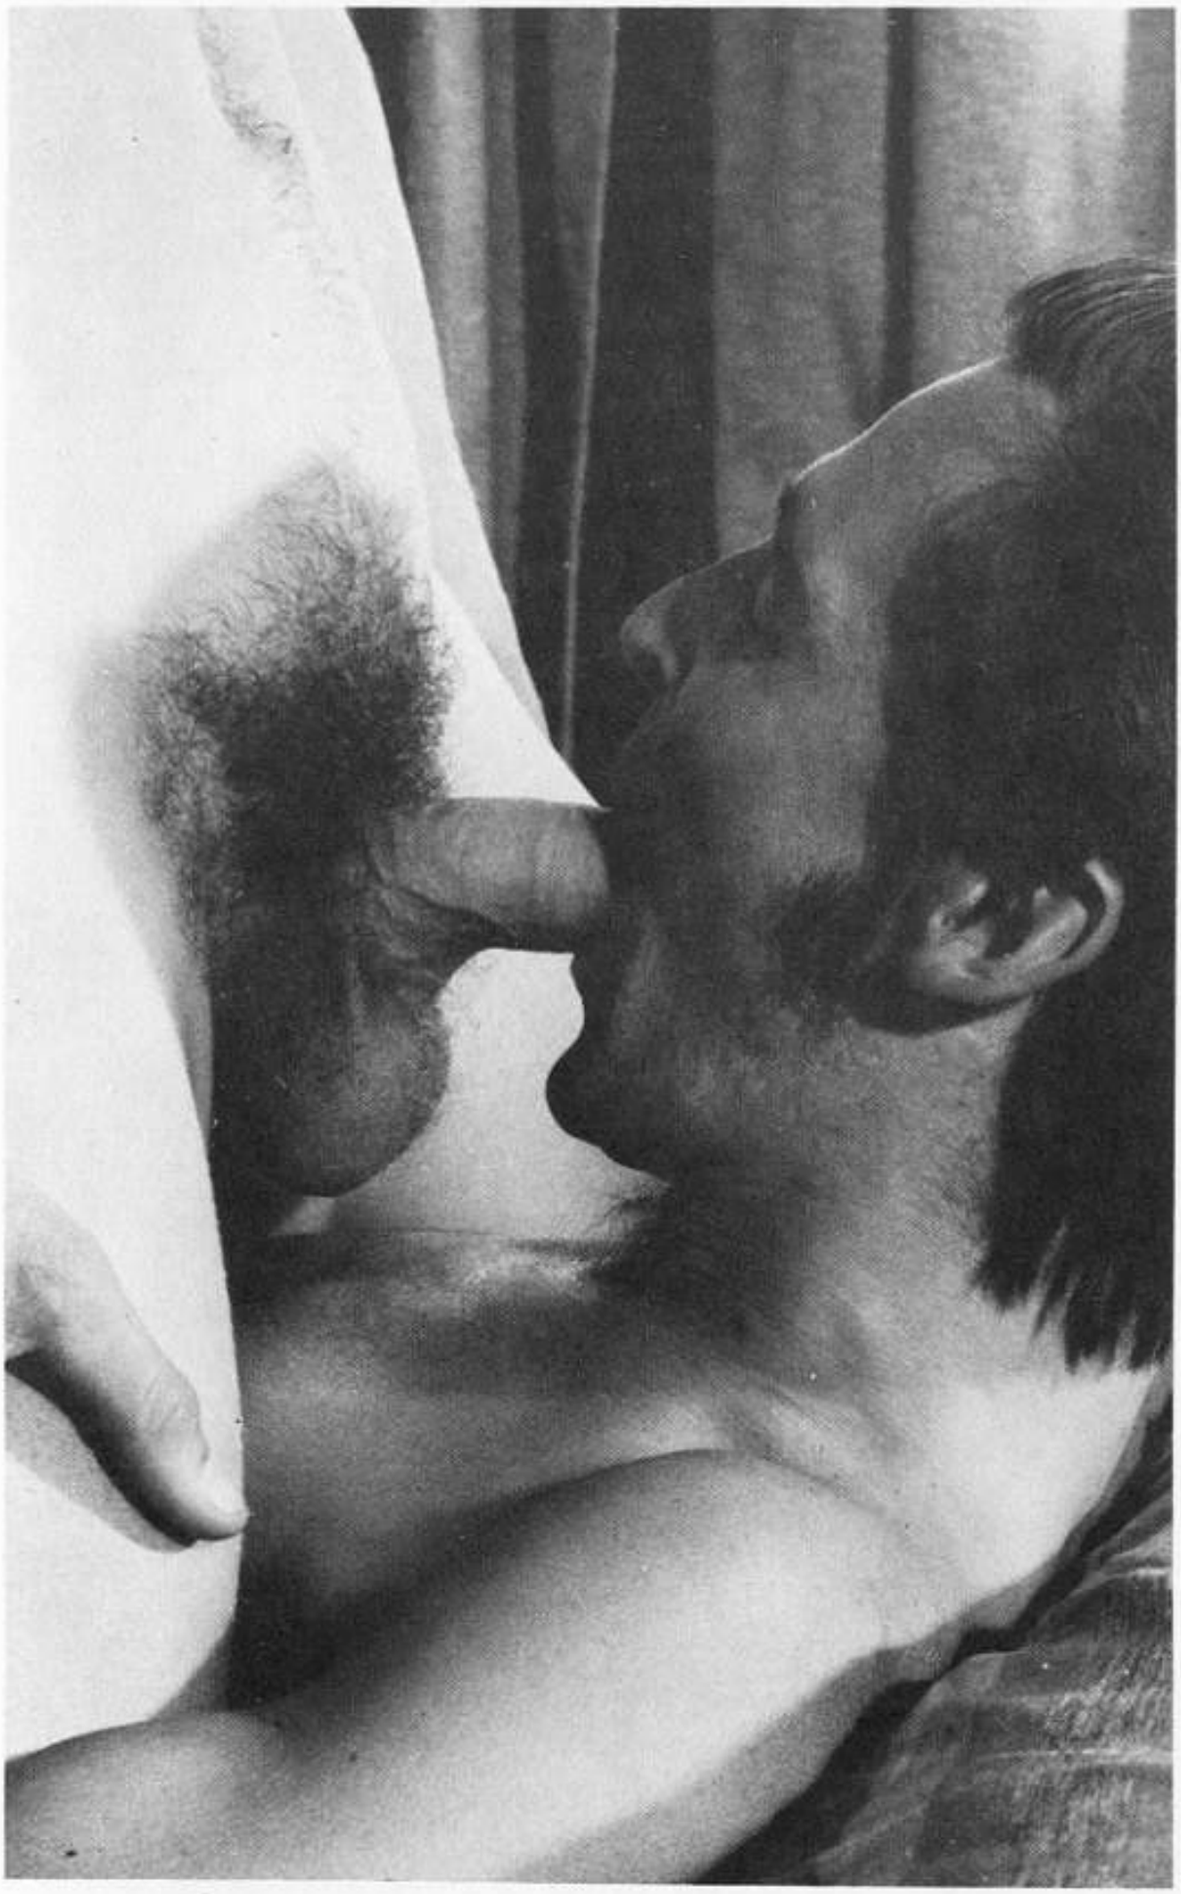
During the sucking act a finger pushing gently in the anal area can keep the stimulation registering at a good peak. This requires skill and must be done with care so that only pleasure results from the movement.

If the explosion of the sperm can be timed so that the man being sucked shoots, and at the same time sucks, the pleasure will be heightened. The male sperm being sucked in represents acceptance. Not eating the sperm can be considered by some tantamount to rejection. A virile man will shoot a good load of sperm and the person who is doing the sucking will enjoy eating it.

CHAPTER SIX

TECHNIQUES OF ORAL SEX ACTION

The fellator can improve the erotic stimulation of his partner if he firmly grips the base of the penile shaft with one hand, and at the same time uses the other hand to caress the anal area or



the inner thighs.

By stimulating the scrotum manually, the fellator can add to the act of oral intercourse.

One form of fellatio sex that can provide lots of sensual excitement is when the one who is doing the sucking puts his head on a pillow and lets his head fall in the hands of the man whose penis plunges into his mouth and part way down his throat. This gives a certain masochistic thrill to the act that cannot be had in the "69" position.

Another position is for the one who is being fellated to stand at the head of a Hollywood-type bed which has no headboard. With his legs spread he can let his penis fall into the mouth of the man below him. Then he can watch in the mirror as his penile shaft is inserted in the fellator's mouth.

This makes it possible for the fellator to reach up and play with the balls of his exciting sex partner. He can also stroke his buttocks and receive the penis farther down his throat than some other positions make possible.

The side-straddle position where the arms rest on the pillow and the fellator grips the thighs, is also very enjoyable. The one whose penis is being sucked can then watch the one who is doing the sucking. This will add greatly to the pleasure and is a fine variant oral sex position.

It is important that the one who is doing the sucking makes sure his teeth do not scrape the penis. By opening the mouth wide enough this will be possible.

There are various ways to do the "69" act of oral intercourse. We have gone into detail in explaining the dog-style anal intercourse act. A variation is for one partner to spread his legs and kneel. Then the other partner will flip his body up, throwing his legs around the head of the other man. Now he connects with the penis of the kneeling man, sucking him in his mouth, while he in turn is being sucked. The double-suck sensation in this unique, unusual position is stimulating indeed.

Some fellators prefer not touching the penis at all. They like to kneel and grip the head of the male member in their mouth and suck away on the shaft until orgasm.

Lip technique is important. First moisten the lips and then lightly touch the head of the penis. The mouth shouldn't completely open to accept the penis at this point. Instead it should be performed slowly.

Then the head can slowly be sucked in between the lips and a gentle sucking action should begin. It is a good idea to make a

quick circular motion of the glans with the tongue. Slowly more and more of the penis is sucked into the mouth. And at the same time the tongue is carefully working its way in swirling movements around the head.

Now the penis can be pushed farther into the mouth, and the one who is doing the sucking can run his head the length of the shaft of the penis. The glans reaches its peak of sexual excitement when it is pushed as far as the throat. Penis penetration should be determined by the one who is doing the sucking.

A constant sucking motion should be maintained. The one who is being sucked can increase his pleasure by sliding his penile shaft slowly in and out, sometimes reaching to the very farthest point he can, without causing any unpleasant feeling on the part of the one who is doing the sucking action.

As the excitement of the sucking sex act builds, the speed of the suck should increase, not diminish. The tempo will build and build until the one who is shoving the penis into the mouth as well as the one who is sucking it will find a sexual harmony.

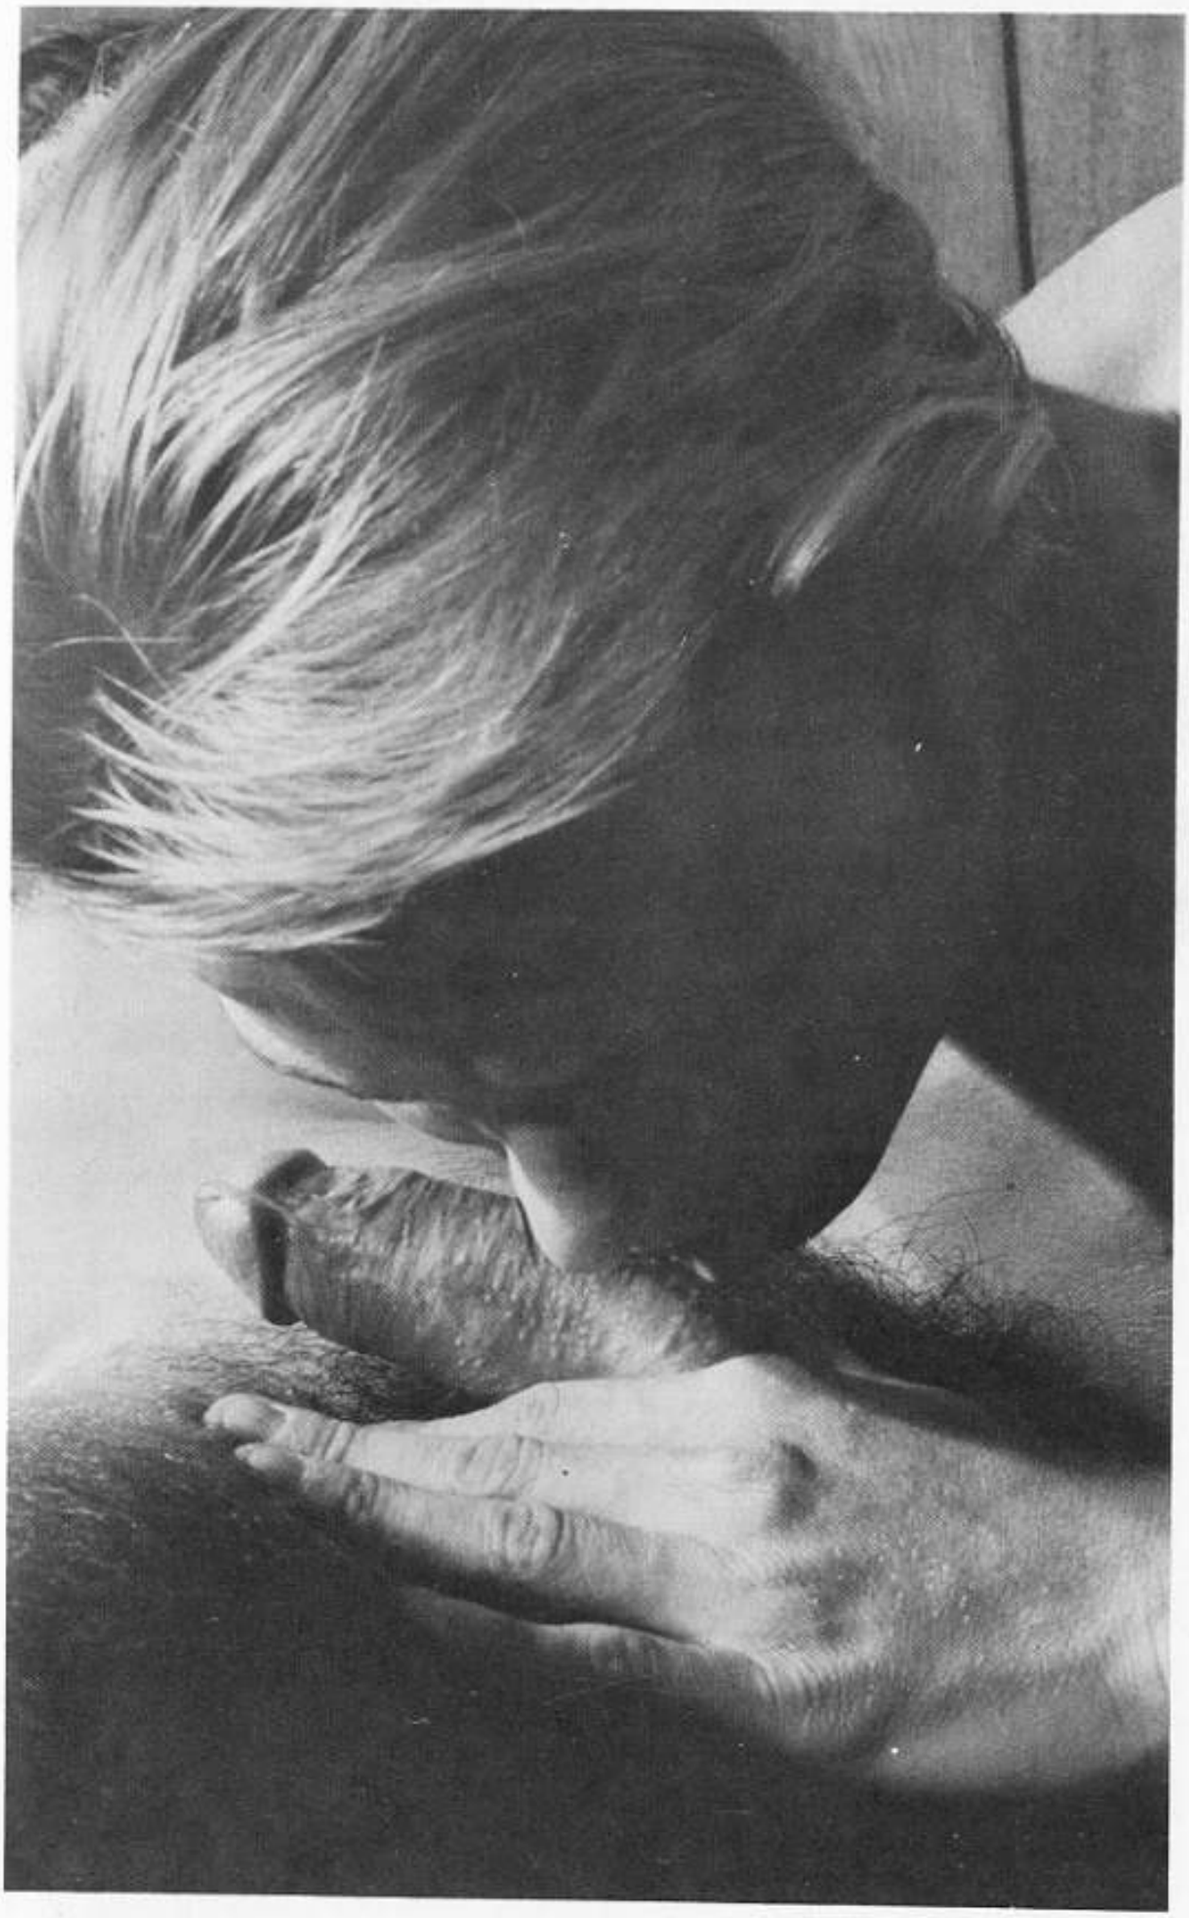
The one who is sucking will increase his partner's sex thrill at this point if he toys with the testicles and gently caresses his inner thigh.

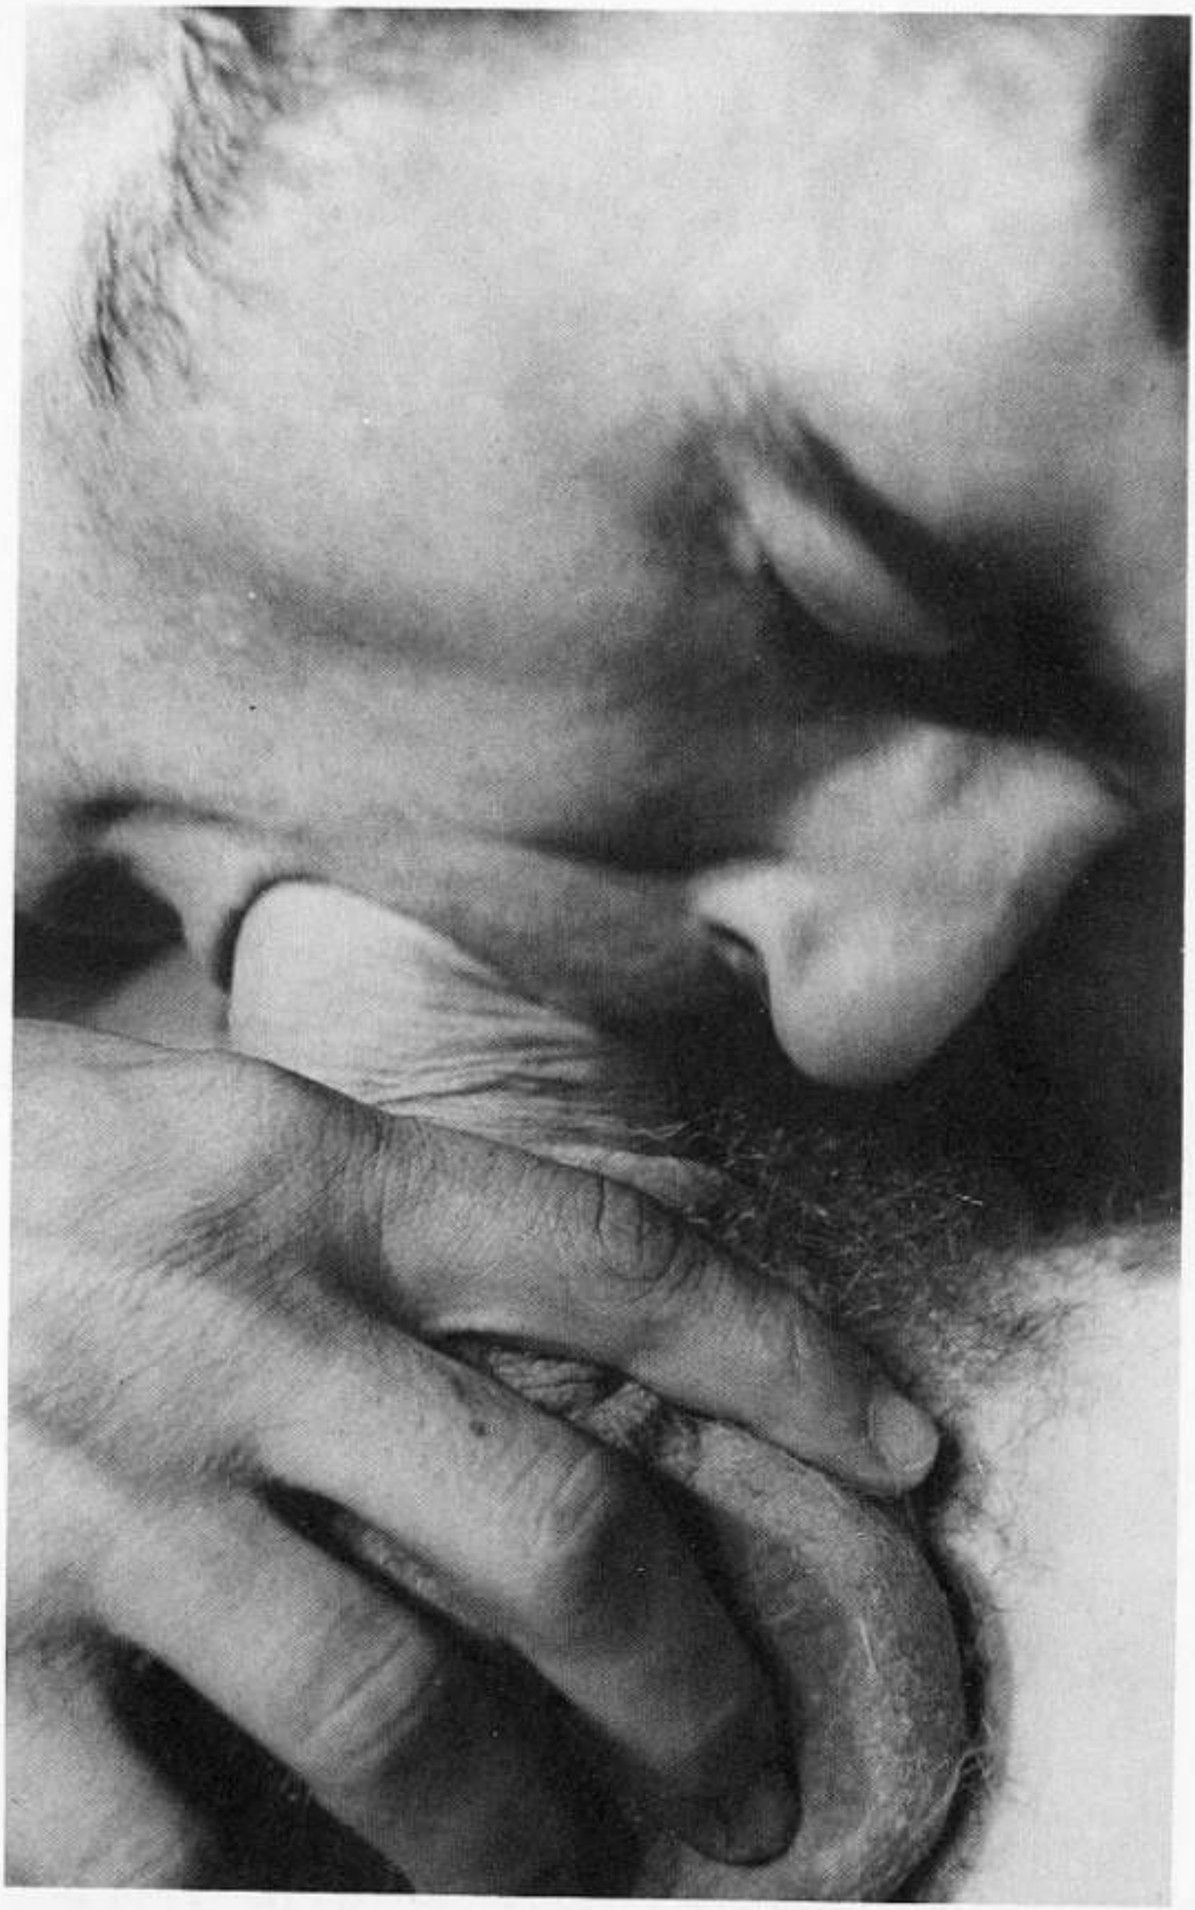
The one who is doing the sucking can tell by instinct, when the one who is having intercourse with him, is ready to climax. Now the one who is being fellated must show a bit of restraint. If he pushes his penis too far down the throat of the man who is sucking his instrument he might cause him to gag. This will slow his suck at the very moment he wants to slide his penis in the warm mouth to climax. If care is taken, no problem need result at this point of the sex act.

At orgasm, the fellator should pull the penis as far into his mouth or throat as possible. This allows the one who is being fellated to shoot his load as far into the mouth as possible. The fellator will find the man he sucks like to have him swallow the semen and he should do so. If he finds it impossible he should at least let the person who is having his penis sucked, ejaculate in his mouth and then spit it out. This will allow completion of the sex act. But if he will try he can easily learn to swallow the semen and thus make the pleasure maximum.

When the act is over, it is unwise to continue sucking. This can cause a tickling, unpleasant sensation as the penile shaft is particularly sensitive at the moment of climax.

The technique of oral sex is enhanced when the fellator does not begin instantly with the penis, but licks and sucks the various erogenous zones of the body.





These zones include the testicles, the anus, the thighs, the buttocks, the lips, ears, toes all varying from person to person. But generally speaking the anus, testicles and penis are the areas which thrill most to being sucked.

A popular variation is the three way suck. This is technically termed *Troilistic fellatio.* One partner lies on his back and takes in the penis of a man who sits on his face. At the same time another man goes down on him and sucks him off. The man in the middle will enjoy the double sensation of sucking and being sucked. If he can time his organs to the tempo of the man whose penis is plunging in and out of his mouth he will be receiving sucking sexual gratification with a good sperm load.

Positions for oral sex are varied and add new dimensions of pleasure to oral sex action. The one who is being sucked lies on his back, spreads his legs apart so a man may kneel between them and begin sucking on the penis. He can masturbate while he is doing this or change places when he completes the sex act for the other man.

Another form of troilistic fellatio is when two men present their penises for the pleasure of the third man. One man lies on his back, the other man lies on top of him. The third man sucks on one penis, masturbating the other. And then he trades off, sucking the other man's penis, masturbating the other. Change in partners can give each man the opportunity to have a two-suck arrangement so that he has two penises instead of one. One to suck on, the other to masturbate adding to the sexual stimulation.

Then there are a variety of sitting positions for oral copulation that can prove to be very stimulating and exciting. One man may sit on the edge of the bed or in a chair. He will spread his legs while the one who will do the sucking kneels between his parted legs. He places his face between his legs, grips the penis firmly and then begins sucking.

Another position might be when the male sits on the bed and spreads his legs wide. The one who will do the sucking lies down on his stomach and places his mouth on the genitals of his partner.

The one who wants to have his penis sucked may stand on one leg, throwing his other leg over the shoulder of the fellator. Then he can position himself so that the fellator can play with his buttocks and toy with his testes while he is sucking him to orgasm.

Another method of oral intercourse on the bed for a change would be for the fellator to lie on his back, allowing the one whose cock he will be sucking to straddle his chest, gradually

inching his penis up to his mouth and down his throat.

A three way sex act can take place when the positions are carefully arranged. First one man lies on his back. The second man lies on top of him. The penis of the first man is allowed to surface between the legs of the man on top. Then the fellator has two penises in a position to suck. He can open his mouth widely and suck on the heads of both penises, all the time guiding them carefully so he won't get too much.

CHAPTER SEVEN

ORAL SEX FROM A STANDING POSITION

There are many reasons why standing for sex can be extremely pleasurable. One of the chief reasons might be the feeling of dominance the one who is being fellated and standing can feel.

To add to the excitement of this type of sex a person might well wear boots and have the rest of the body bare naked. Then as an added sexual thrill it might be suggested that the partners enact a drama-sex scene. This can only add impact and stimulation. For example one of the sex partners can be the Roman guard who makes the slave lick his boots. From there he demands he lick the rest of his body. He might bend down and tell his sex slave to lick his anal area. And then he could tell him in sufficiently crude erotic terms to literally suck his cock off.

With a good firm grip, he is held in place while he furiously sucks at the tool of the man whose body he must satisfy sexually. It is a wild way to go, but it is not the only way to create diversion which we might term creative sex.

Sometimes a light whipping can bring pleasure to both individuals. One partner can demand the other strip and lie down on the bed. Then he can take a small whip and crack it across his bare buttocks. This should be done with care. The object is to tease and excite, not hurt. But this act can add a new dimension to the sexual excitement of oral sex. Following the crack of the whip across the bare buttocks, the sex partner can insist upon some unusual oral sex action. For example he can sit on the bed and lower his buttocks in the face of the fellator. Then he can demand that the fellator lick around his anal opening. When he has been

sufficiently excited, he can tell him to suck his anal opening. He can be playing with the penis of the fellator. Now he can masturbate the fellator with sure, strong strokes. About this time he can ask the fellator to take his penis in his mouth and suck on it. Simultaneously he can grab the penis of his partner and commence the sucking act himself. Now he can plunge his penis into the mouth and throat of the fellator and plow his own mouth over the fellator's penis. The act is finished in the classic "69" style with teasing variations.

This is the type of variation that can only add interest to the sex act and keep both persons constantly stimulated at all of their erogenous zones.

Another diversion might be for the one who is being fellated to stand on a table. Then he can push his penis into the waiting face of his sex partner. The fellator is in a position to obtain a good, firm grip on the buttocks of his partner, pulling him toward him. Now, the man who is pushing his penis into the face of the other can develop a style of intercourse that would be difficult in any other position. By jabbing his erection to the left, he will be gripped in one position by the fellator. As he turns the

aim of his thrusting male member in another direction, the fellator will switch positions but continue a firm sucking pressure. This can continue until the fellator feels the tempo build for the climax. Then the straight-ahead thrusts down the throat, and the extra firm grip on his head will tell him of the impending ejaculation.

It is very important not to quit the sucking action for a second. From here to orgasm he must keep the suck going as the penile shaft slides down his throat. Gripping the body closer to him he is thus prepared for the final thrust and the eating of the hot sperm load. Suddenly the sperm jet-stream will pour down his throat and he will clasp in climax as he sucks in his sex partner's load.

CHAPTER EIGHT

ANALINGUS SEX (MOUTH-ANUS CONNECTION)

Analingus is the technical term for the mouth-anal sex contact. When homosexuals want to experiment with all of the various oral-contact sex connections, analingus sex is a favorite sex practice.

The reason that homosexuals like this form of sexual excitation is identical to the reason heterosexuals practice this kind of sexual excitation; because it feels so good. The reason is that the licking tongue applied to any human beings anal area provides sexual excitement as this is a naturally erogenous zone.

Nature has made it this way and when two people decide to try this form of sexual excitement it simply means they are trying to pull all the pleasure possible out of various sex connections their bodies are capable of making.

The act of analingus bears certain similarities to that of sunnilingus. The orifice is entered with the tongue in both cases and both orifices at other times excrete waste material. But it is equally true that both openings can be kept clean. With this in mind the stigma of dirty sex can be erased.

One form of anal stimulation for the fellator to use to intensify the pleasure of oral sex might be the digital-anal stimulation. While the penis shaft is being sucked, the finger may be inserted in the anal area so that the pleasure is increased.

Anal sex is far more pleasurable if planned and agreed upon. In this way a good, cleansing shower, with deodrorant soap and body splash can insure eliminating much of the repugnance usually associated with the anal area. When the physical aspect to this type of sex is taken care of, the psychological aspect should be considered. If either sex partner feels such a sex connection is dirty or demented, then forget it. It will only result in a very limited warped type of pleasure.

However, if both partners clean their bodies in preparation for this form of sex, then it is possible for them to reach a wild and thrilling sex crescendo that no other type of sex connection can offer.

Should a person want to try anal sex action following a shower, but feel reluctant to mention such an intimate sex contact, it might be wise to just let things develop and act accordingly. In this way the psychological aspect can be handled with caution and wisdom.

For example, the tongue can make its erotic trail around the body. As the tongue lightly touches and tickles the body, it can caress the scrotum area and lick along the penile shaft, by lifting the legs it can explore the anal area. Depending upon the response to this tongue thrust the decision should be made to continue.

If every indication given by the sex partner indicates that there is considerable pleasure from this form of sex encounter, then the only thing to do is to continue the anal-oral action. Frankly, it is a good idea to perform anal-oral sex contact in a "69" position. This will provide the top excitement sexually for both partners and prove the most rewarding psychologically for both partners. The state of mind must be one of total sexual freedom, complete release from all inhibitions and a willingness to experiment to decide precisely how pleasurable this kind of sex contact is — based on first hand experience.

The steps to oral-anal sex might be something like this.

A. Each partner should agree to perform in the anal area for the other. One good way to begin is to lie on one's side and lift one leg.

B. Tongue caressing and licking should follow all around the anal area. The penis can be manipulated at the same time.

C. Now the cheeks of the buttocks should be parted allowing the tongue total freedom to roam around this erotic zone.

D. Now that each partner has opened the cheeks of the buttocks he should lick in swirling, swift strokes with the tongue all around the anal opening.

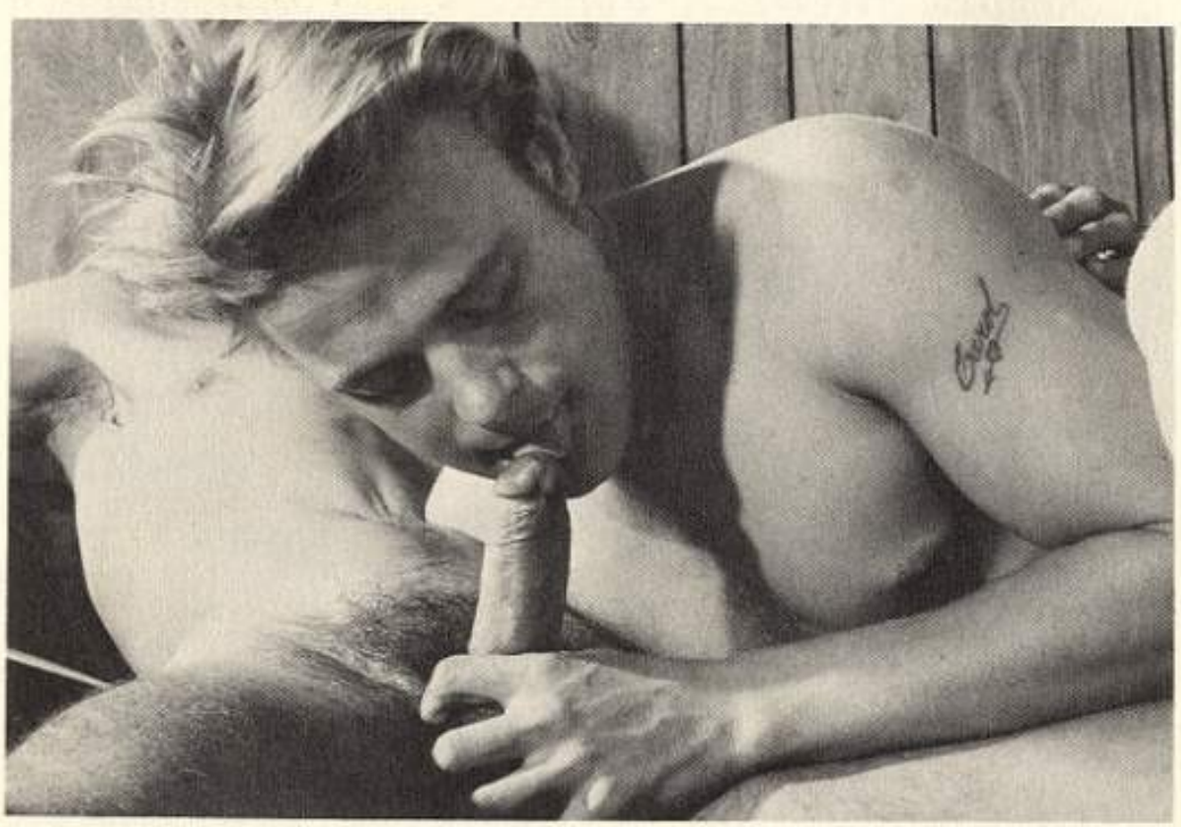
E. If the penis is responding with total erection and the excitement of this unusual kind of sex is showing, it would be an excellent idea to masturbate the penis.

F. Now that the tempo of the masturbation has been established, match the tempo of the tongue thrusts as the tongue plunges into the anal area thrusting back and forth at a furious pitch.

G. Time the moment when the penis is ready to shoot its load with the tongue-thrusting action. Then, when the load is ready to shoot, instantly pull the tongue out of the anal area and put the mouth over the head of the penis.

H. Suck the hot sperm load in, gripping, squeezing, playing with the buttocks as the anal-lingual sex act is completed.

One other method of anal-lingual sex action is for three partners to engage in this kind of sex. This is homosexual troilism. One sex partner gets on his knees and the other one gets under him to latch onto his penis. The third sex partner spreads the buttocks and commences the sucking action. Now he is obtaining sucking sex from both the penis area and the anal area. The excitement is allowed to build until the climax when the one who is actually doing what might be called in common terminology "tongue-fucking" speeds up his tongue thrusts as he recognizes the man is about to unload his sperm in the mouth of the third man.



There are certain guidelines to follow in anal-oral sex. The tongue should tickle the anus. This can best be done by tiny circular motions. When the tongue is stiffened, it should thrust between the lips of the anus, sticking it in as far as possible. One who does an expert job will recognize the importance of the tongue-thrust in making the ultimate sex thrill possible. The one who is being thus sucked might even say, "Stick it up there and suck on it" as this is an almost universal wish once the tongue-anal action has begun.

The other way of doing it is for one partner to lie flat on his stomach. Begin by giving a body massage. Then spread the cheeks of the buttocks and stroke gently on the inner thigh. Once this is done the excitement builds. Now begin licking all around the cheeks of the buttocks and play with the penis below with one hand. Or it might be a good idea to massage the prostate gland to stimulate the fullest erection possible. Now, the cheeks must be spread apart and the tongue swirl around in wide, swathing movements. Then the tongue can plunge in as far as possible in hasty, fast, fucking movements. Usually the one who is thus being taken care of sexually, will lift his buttocks to meet the thrusting tongue. The action is so pleasurable he will do all he can to make sure the tongue slips in his anus opening as far as possible for the thrill grows greater if this sex action is followed.

Another method of anal sex is for the partner to place his buttocks in a squatting position over the partner's mouth. Then

the partner can grip his thighs and plunge his tongue up the other's anal opening and provide him with his sexual satisfaction.

Another method of anal sex is for a man to lie on a bed, raise his legs and draw them under his arms. Then the sex partner can position himself under his buttocks, often placing his buttocks on a pillow or two. This gives the one who will perform anal sex the chance to have a good vantage point. He can easily lick all around the buttocks and then part the cheeks and insert his tongue in the anal opening.

Then there is the kneeling position. The passive partner kneels on his hands and knees. He slants his body forward and bends down. Then his partner kneels behind him, with his body facing the same direction. Now he is in a position to part the buttocks and begin the oral-anal sex act.

Another form of erotic stimulation which adds to the excitement of this form of sexual encounter is for one partner to put honey on the buttocks area. Squeeze a few drops of the liquid all around the anal area. This will accomplish the groundwork for an unusual and stimulating sex performance. Tasting the delicious honey can be exciting for the person doing the licking as well as the person being licked. Now is the time to finish sucking the sticky honey and then glide the penis in full thrusting force into the anal opening. Following this unique taste-sex experience, pleasure of thrusting the tongue into the anal opening will be still more exciting.

CHAPTER NINE

ORAL-GENITAL LOVEMAKING ANALYZED AND PUT IN PERSPECTIVE

Oral-Genital sex connection cannot be considered pathological, providing it is not a compulsion when it is the only type of sex connection a person can enjoy. The body is obviously capable of many methods of sexual excitation. To get hung-up on one exclusively might become a problem.

However, variations in sex actually add the zest and stimulation to life that is needed to make it more exciting and pleasurable.

Oral-genital foreplay can be supplementary to the sex act and

extremely exciting. The love-bite can make a partner experience extreme sensual delight and pleasure.

The clues that a sex partner is nearing orgasm can be given by one man telling the other man he is ready to shoot his load. Or the feel of the penis itself, as it increases the pace of the penis thrust. As orgasm approaches, there will be heavy breathing and the body will thresh about.

The most exciting moment of all is climax. This is when the most stimulating personal and intimate association two people can ever have takes place. One man will receive the hot vital fluids of the other man. As these hot fluids gush into his mouth and flash down his throat the intensity of sexual excitement will reach its zenith.

It is important that both persons who are involved in this form of sex connection have a wholesome attitude toward what they are doing. If one is wrapped in myth that labels such acts foul, his brainwashing will make the ultimate in sexual stimulation impossible.

Therefore, it is vital both partners have healthy, scientifically enlightened views toward homosexual oral sex. Otherwise, it is best to forget it for the vibrations will be all wrong.

When the minds are in harmony, the body sexual harmony will be a tingling, exciting, total sensual delight. Full freedom to wander around the body with the licking, sucking tongue cannot help but make for greater sensual fulfillment. But the knowledge contained in this book should be consulted.

Possibly the most important thing to remember is to take time to build to climax. Speed in sex can only lessen sexual sensation. It is imperative that the sex partners take their time, teasing, loving caressing as they prepare for the ultimate in sexual thrills; the unloading of the sperm into a hot, sucking mouth or the receiving of the hot sperm load which can intensify the sexual experience.

With the mouth working its way slowly over the head of the penis, then focusing its sucking force on the penis head where the major portion of the sensitivity is located. This can generate better sex. Also the lower lip might drag over the head as it is drawn back and forth. This is very pleasurable and a special technique only employed by the masters of oral sex.

So we conclude this book with the earnest hope that what was written here will bring more happiness to those who are not afraid of their bodies nor afraid to enjoy them sexually to the ultimate.

With this attitude, wholesome oral sex can be completely enjoyable.
